

A-5-1.2 VH Series

1. Features

(1) High-performance end seals

High-performance end seals with a multi-lip structure prevent the entry of various foreign matters.

(2) NSK K1™ lubrication unit (standard)

Outstanding lubrication support of NSK K1 further improves sealing capability and durability. Additional NSK K1 units can be mounted for specific usage conditions and environments.

(3) Tapped holes on a rail bottom surface (optional)

In addition to standard mounting bolt holes (counterbores on a rail top surface), a specification for tapped holes on a rail bottom surface for enhanced sealing capability is available for the VH Series. (Refer to the dimension table.)

(4) High self-aligning capability (rolling direction)

Same as the DF combination in angular contact bearings, self-aligning capability is high because the cross point of the contact lines of balls and grooves comes inside, reducing moment rigidity.

This increases the capacity to absorb errors in installation.

(5) High load carrying capacity to vertical direction

The contact angle is set at 50 degrees, thus increasing load carrying capacity as well as rigidity in vertical direction.

(6) High resistance against impact load

The bottom ball groove is formed in Gothic arch and the center of the top and bottom grooves are offset as shown in Fig. 2. The vertical load is generally carried by the top rows, at where balls are contacting at two points. Because of this design, the bottom rows will carry load when a large impact load

is applied vertically as shown in Fig. 3. This assures high resistance to the impact load.

(7) High accuracy

As showing in Fig. 4, fixing the master rollers to the ball grooves is easy thanks to the Gothic arch groove. This makes easy and accurate measuring of ball grooves.

(8) Random matching type

Random-matching of rails and ball slides are available.

(9) Improve rating life dramatically

New ball groove geometry is introduced,

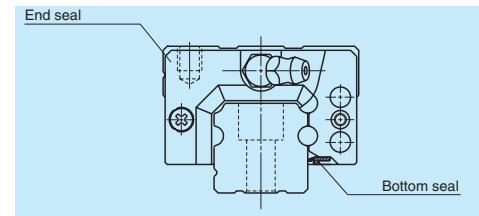

Fig. 1 VH Series

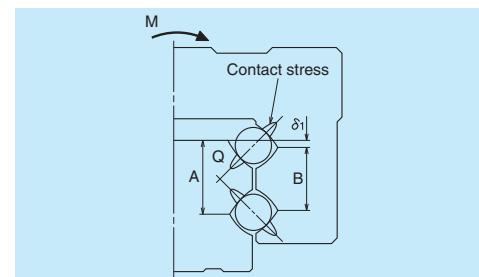

Fig. 2 Enlarged illustration of the offset Gothic arch groove

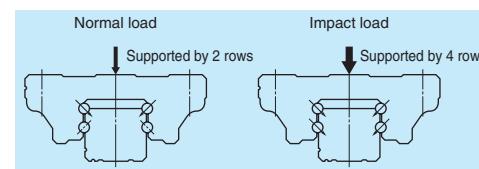

Fig. 3 When load is applied

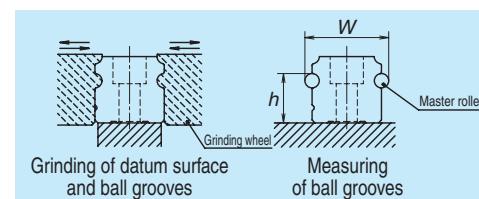

Fig. 4 Rail grinding and measuring

which has been developed by utilizing NSK's state-of-the-art tribological and analytical technologies. Due to the optimized distribution of contact surface pressures, the rating life has dramatically increased. As compared with the conventional products, the load rating capacity has increased to 1.3 times, while the life span has increased to twice¹⁾.

¹⁾: Representative values of series.

●Comparison with NSK standard products

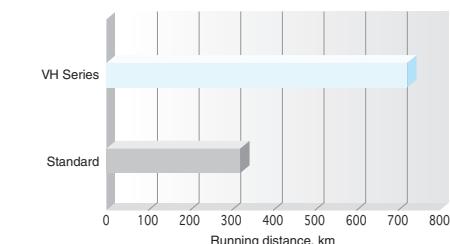

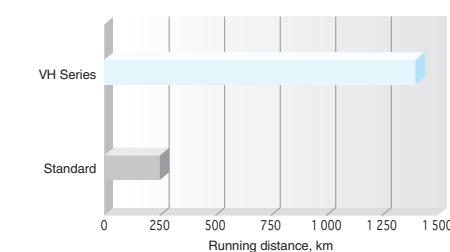

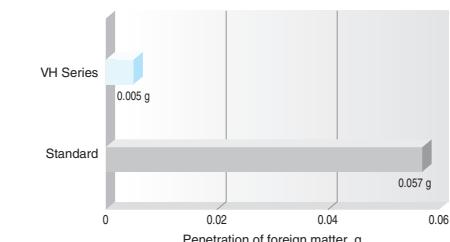

Less than 1/10 the level of fine contaminants

Results of dust-proof tests reveal that the entry of fine contaminants is reduced to less than one-tenth of existing standard series due to improvements in sealing capability.

Test sample	: VH30AN
Speed	: 16.7 mm/sec
Contaminant	: Graphite powder (average grain size: 0.037 mm) + Grease

compared to the standard series, as shown in the graph.

Test sample	: VH30AN (preload of 3 200 N)
Rail orientation	: Horizontal (wall mount)
Speed	: 400 mm/sec
Lubrication	: AS2 grease (prepacked AS2 only)
Contaminant	: Fine wood particles

Operating life under contaminated environments is more than 5 times longer

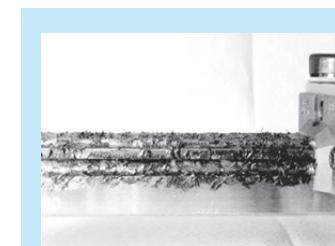

Durability test with rubber fragments

Extreme durability tests under contaminated environments using rubber fragments show that durability of the VH Series extended more than five times longer than the existing standard series, as shown in the graph.

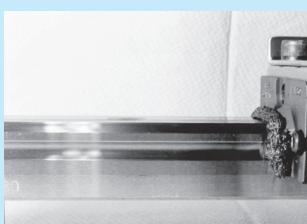

Test sample	: VH30AN, preload code Z1 (preload of 245 N)
Rail orientation	: Horizontal (wall mount)
Speed	: 500 mm/sec
Lubrication	: AS2 grease (prepacked AS2 only)
Contaminant	: Rubber fragments

Durability test with fine wood particles

Extreme durability tests in a contaminated environment with fine wood particles show that durability of the VH Series is more than doubled

Before the passage of ball slide
(Heavily contaminated with wood particle)

After the passage of ball slide
(All contaminant particles are swept away)

The data shown in the catalog are the results of our tests, and no warranty is given to sealing performance on actual usage on machinery. Sealing performance is affected by usage environment and lubrication conditions. Dust covers and other measures to keep machinery free of dust are recommended.

(2) Accuracy standard

The preloaded assembly has five accuracy grades; Ultra precision K3, Super precision K4, High precision K5, Precision K6, and Normal KN grades, while the random-matching type has Normal KC grade only.

• Tolerance of preloaded assembly

(3) Specification for tapped holes on a rail bottom surface

- Special high carbon steel is available for this specification.
- Applicable accuracy grades are precision grade (K6) and normal grades (KN and KC) only.
- The minimum rail length for production is 400 mm.
- The tapping pitch is the same as the pitch for regular mounting bolt holes. Please refer to the dimension table.

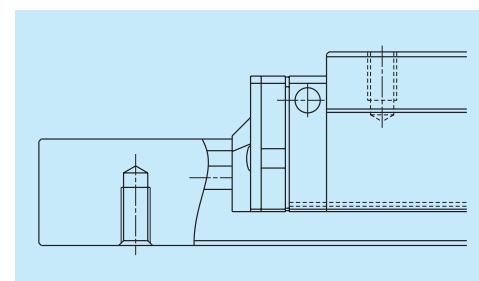

Fig. 11

6. Lubrication components

Refer to pages A38 and D13 for the lubrication of linear guides.

(1) Types of lubrication accessories

Fig. 12 and Table 10 show grease fittings and tube fittings.

We provide lubrication accessories with extended thread body length (L) for the addition of dust-proof accessories such as NSK K1 lubrication unit, double seal and protector.

We provide a suitable lubrication accessory for the special requirement on dust-proof accessories.

Consult NSK for a lubrication accessory with extended length of thread body for your convenience of replenishing lubricant.

Please ask NSK for stainless lubrication accessories.

7. Dust-proof components

(1) Standard specification

To keep foreign matters from entering inside the ball slide, VH Series has an end seal on both ends, and bottom seals at the bottom.

Two NSK K1, one at each end, are installed as the standard equipment.

(2) Double seal and protector

For VH Series, double-seal and protector can be installed only before shipping from the factory.

Please consult NSK when you require them.

Table 12 shows the ball slide length when a double seal set and a protector are installed.

8. Design Precautions

Because the product is used under severe operating conditions that require high performance end seals, please inform NSK about your service conditions using the technical data sheet on page A152.

8. Reference number

Reference numbers shall be set to individual NSK linear guide when its specifications are finalized, and it is indicated on its specification drawing.

Please specify the reference number, except design serial number, to identify the product when ordering, requiring estimates, or inquiring about specifications from NSK.
